CAREER OBJECTIVE

Computer science fuels my curiosity. I am a student with a knack for full-stack web development, building applications from the ground up. I am also a hardware enthusiast, understanding the intricacies of computer systems and bridging the gap between software and embedded hardware.

EDUCATION

2023 – 2027 B.E., Computer Science & Engineering at **Presidency University**, Bangalore
2023 Senior Secondary (XII), CBSE Science at **Kendriya Vidyalaya No. 2**, Jalahalli East 82.00%

WORK EXPERIENCE

Software Development Intern — Bharat Electronics Limited (BEL) Aug 2025 – Present

- Automated conversion of unstructured PDF requirements into professional software design documents with 90%+ accuracy, featuring dynamically generated architecture diagrams and comprehensive technical specifications.
- Demonstrated full-stack development skills, AI integration capabilities, document processing expertise, and end-to-end solution delivery for enterprise use cases.

Web Developer — Co Lead, VIKASANA Dec 2023 – Present

- Leading web development initiatives for a student-led R&D organization focused on innovative projects, hackathons, and conducting workshops and seminars.
- Mentoring team members and driving technical direction across multiple projects.

PROJECTS

Automated Billing System (automated-billing-iot) Python, YOLOv8, FastAPI, Raspberry Pi, IoT
ML-powered retail solution using Raspberry Pi and YOLOv8 for real-time object detection and weight processing. Frontend built with tkinter GUI; backend runs a custom-trained YOLOv8 model on a FastAPI server. Won Top 5/70 projects at the university-level expo.

Beat Management System for State Police (police-beat-management) React, Next.js, Node.js, WebSockets, MongoDB
Comprehensive real-time dispatch and incident reporting system for state police, featuring SOS functionality, AI analytics and suggestions, and beat management. Built on the MERN stack with WebSockets and Next.js. Secured Top 10 among 400 teams at Presidency University hackathon.

6G Protocol Parser (6g-protocol-parser) Rust, Nom, Networking, Systems
High-throughput, zero-copy network protocol parser built in Rust using the Nom parsing framework. Features custom bit-level manipulation for 6G-ready packet headers.

C REST Server (c-rest-server) C, Socket Programming, Systems, Concurrency
Low-level REST API server implemented from scratch in C using socket programming and POSIX threads. Handles raw HTTP requests and responses without any external frameworks.

SKILLS

Languages	Java, Python, JavaScript, TypeScript, C, Go
Web Technologies	React, Next.js, Express.js, Node.js, Vue, Svelte, Flask, HTML/CSS
Databases	MongoDB, PostgreSQL, SQLite
Hardware	Arduino, Raspberry Pi, ESP32
Machine Learning	YOLOv8, Object Detection, Computer Vision, Mistral Basic OCR
Other	Blockchain, Supabase, Firebase, WebSockets, FastAPI, Azure, Shopify, WordPress

EXTRACURRICULAR ACTIVITIES

Hackathons Active participant in various hackathons with consistent top-tier performance, including university-level and national-level competitions.

Leadership Conducted multiple hackathons and workshops through college club both as volunteer and co-leader at VIKASANA.
